

March 15, 2010

Don;

I just wanted to write and thank you for the fine product you have provided to us here in Alaska. As you know we put our domes in "High Risk" areas throughout Alaska where the wind can reach Excess of 150mph and snow levels 20-40ft or more. That being said the domes have provided Top Notch protection for my crews traveling for maintenance and construction during all times of the year.

Many of my crews have thought this has been the #1 safety and convenience item that we have available to them and their coworkers.

One of the advantages that I see as a Supervisor of Maintenance is the fact that when crews go out to spend, sometimes weeks at a time at a repeater site there time is not spent on maintaining their living quarters but taking care of the task at hand at that particular site. The ease of construction and low maintenance design makes them the perfect safety and protection product for our company and for our people.

Thanks again,

Brian Buck
